                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             399
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               219
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               80

                                                                                                                                                                                                                                                                                                                                                                                                                16-SEP-1998
```

The invention relates to human PRO polypeptides (secreted or transmembrane polypeptides) and the polynucleotides encoding them. The PRO polypeptides and polynucleotides can be used in treating pathological disorders and tumours, in therapeutic treatment of cardiac insufficiency disorders and tumours, in therapeutic treatment of disorders involving pathological secretion by the pancreas, including diabetes. They can also be used in treating disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal casions, and skin diseases associated with abnormal keratinocyte differentiation (e.g., psoriases, epithalial cancers such as lung squamous cell carcinoma, epidermoid carcinoma of the vulva and gliomas). The sequences can be used as molecular markers for protein clectrophoresis purposes and can be utilised in protein-protein binding assays, biochemical screening assays, immunoassays and cell-based assays.

This sequence represents a human PRO polynucleotide of the invention Isolated nucleic acid useful for e.g., treating pathological disorders encodes a secreted or transmembrane protein.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to the isolation of novel human secreted and transmembrane proteins (PRO polypeptides), and the polynucleotide sequences are useful in molecular biology, as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy. The polynucleotide sequences may also be used in preparing PRO polypeptides by recombinant techniques, and in generating either transgenic animals or knock-out animals which, in turn, are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or their antibodies are useful in preparing a medicament for treating a condition responsive to the polypeptide or antibody, such as cancer, altaheimer's disease or ischaemia, and in various diagnostic assays. The present sequence encodes a human PRO polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SerPheGluThrCysSerTyrGlyTrpValGlyAspGlyPheValVallleSerArglle 100

(GETH ) GENENTECH INC.

The invention relates to an isolated mucleic acid with at least 80% nucleic acid sequence identity to a nucleotide sequence encoding one of 6 secreted/transmembrane polypeptides, or PRO polypeptides or encoding a CR secreted/transmembrane polypeptides, or PRO polypeptides or encoding a CR propertied extracellular domain. Also included are a vector comprising the PRO nucleic acid, a host cell comprising the vector, producing a PRO colypeptide (by culturing the host cell for the expression of the PRO oplypeptide (having at least 80% sequence cell culture), an isolated PRO polypeptide (having at least 80% sequence identity to: (c) an amino acid sequence selected from the 61 PRO proteins; (b) an amino acid sequence encoded by a nucleic and molecule deposited with an ATCC number (detailed in the specification); or (c) an extracellular domain of a PRO polypeptide or to a PRO polypeptide or to a PRO polypeptide of containing the section as completed or polypeptide of tused to a percent of sequence, an anti-PRO antibody, detecting a protein of percentage and a sample suspected of containing the polypeptide.

CC peptide), a chimaeric molecule to a cell expressing a PRO245 or PRO1868 in a sample suspected of containing the polypeptide.

CC peptide, and encoded by a nucleic acids which encode PRO can be used to generate either cransgemic animals or knock-out animals which may be used to generate either transgemic animals or knock-out animals which may be used in gene therapy, in chromosome identification, as chromosome markers, or in generating probes. The PRO polypeptides and encodes may laso be used in tissue cyping.

CN PRO1900 polypeptides and undleic acids may also be used in tissue typing.

CN PRO pubpeptides are useful in diagnostic assays for PRO, and in affinity purification of PRO from recombinant cell culture or natural concres. The present sequence encodes a PRO protein. New transmembrane polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, in chromosome identification, chromosome markers, in generating probes and in tissue typing. ```

New genes and secreted and transmembrane polypeptides (e.g. PRO245 or PRO335), useful for treating or diagnosing e.g. Alzheimer's disease, cancers, hemorrhage, rheumatoid arthritis, diabetes, cirrhosis, ischemia

Claim 2; Fig 73; 482pp; English.

The invention describes a new isolated nucleic acid molecule comprising the full length coding sequence of the DNA deposited with the American C the full length coding sequence of the DNA deposited with the American C Type Culture Collection (e.g. ATCC Deposit No. 209258), or a sequence with at least 80% identity to a DNA encoding a PRO polypeptide comprising any of 61 sequences having 164-119 amino acids fully defined in the specification. The PRO polypeptides or polynucleotides are useful as particularly useful for detecting or treating e.g. Parkinson's disease, particularly useful for detecting or treating e.g. Parkinson's disease, althermer's disease, inflammations, nephritis, wound healing, nerve repair, collateral blood vessel formation, cancers (e.g. colorectal cancer), haemorrhage (or reduce risk for haemorrhage), rheumatoid arthritis, diabetes, cirrhosis of the liver, fibrosis of the lungs, restenoisis, dammals (e.g. humans (e.g. keloids or scarring), ischaemia, strokes, hypertension, heart attacks, atherosclerosis, or infertility in mammals (e.g. humans, dogs, cats, cattle, horses, sheep, pigs, agacts, or rabbits) The PRO polypeptides are useful as targets for therapeutic intervention in these diseases. The PRO polypeptides are also useful cetermination of the presence of these diseases. The PRO polypeptides are useful as hybridisation probes, or for screening libraries of human cDNA, genomic DNA or mRNA. The PRO genes may also be used in gene chocaes a novel human secreted and transmentance PRO polypeptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TITLE
```

LOCUS

```
Smal; Site_2: Smal; A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions."
